## A NEW COMPOSITION

### **Field of the Invention**

5 The present invention relates to a composition which comprises (*R*)-5-carbamoyl-8-fluoro-3-*N,N*-dicyclobutylamino-3,4-dihydro-2*H*-1-benzopyrans in the form of the free base, or a pharmaceutically acceptable salt and/or solvate thereof, and (+)-1-[3-(dimethylamino)propyl]-1-(*p*-fluorophenyl)-5-phthalanarbonitrile in the form of the free base, or a pharmaceutically acceptable salt and/or solvate thereof. The present invention  
10 also relates to a process for the preparation of the inventive composition, pharmaceutical formulations containing said composition and to the use of said composition either by concomitant administration or by separate administration as an improvement of the treatment of affective disorders such as depression, anxiety, obsessive compulsive disorder (OCD), etc.

15

### **Background of the Invention**

Today, it is generally considered that antidepressants take 2-4 weeks to reach full clinical effect. In contrast, the side effects occur immediately. Thus, slow onset of action of  
20 antidepressants leads to a vulnerable period for patients in which they experience the side effects, but not the therapeutic effects of drugs. There is often a heavy burden on the treating physician to persuade the patient to continue with the treatment during this period. Furthermore, in suicidal patients, as the onset of action is gradual, initiative may be regained without the experiencing of full reversal of symptoms, leaving a window of risk  
25 for suicide and a frequent requirement for hospitalization. An antidepressant with fast onset of action would not only be beneficial due to the faster symptom reduction, but would also be more acceptable to patients and physicians and reduce the need for and duration of hospitalization. The same long period to reach full clinical effect has been shown in the treatment of other affective disorders such as anxiety and OCD.

30

**Prior art**

In WO 96/33710 is disclosed that the compound (*R*)-5-carbamoyl-8-fluoro-3-*N,N*-dicyclobutylamino-3,4-dihydro-2*H*-1-benzopyran which has high affinity to 5-HT receptors and antagonizes 5-HT<sub>1A</sub> mediated responses induces a rapid improvement of depressed patients treated with serotonin reuptake inhibitors.

**Summary of the Invention**

10 The present invention is directed to a new composition comprising of the specific 5-HT<sub>1A</sub> antagonist (*R*)-5-carbamoyl-8-fluoro-3-*N,N*-disubstituted-amino-3,4-dihydro-2*H*-1-benzopyran in the form of the free base, or a pharmaceutically acceptable salt and/or solvate thereof, and the specific 5-HT reuptake inhibitor (+)-1-[3-(dimethylamino)propyl]-1-(*p*-fluorophenyl)-5-phthalanarbonitrile in the form of the free base, or a  
15 pharmaceutically acceptable salt and/or solvate thereof. Said composition attains a faster onset of action and consequently, provides a more efficacious treatment of the patients suffering from affective disorders, particularly depression.

It has been shown in animal studies that acute administration of selective 5-HT reuptake inhibitors (SSRIs) decreases the electrical impulse propagation in 5-HT neurones via a  
20 negative feedback reaction probably mediated by collateral 5-HT axons releasing 5-HT in raphé nuclei. By inhibiting the somatodendritic 5-HT<sub>1A</sub> autoreceptors in the raphé nuclei the selective antagonists counteract the decrease in propagation caused by 5-HT reuptake inhibitors. This indicates that a selective blockade of somatodendritic autoreceptor i.e. 5-HT<sub>1A</sub> antagonist may have a clinical potential to improve the efficacy of 5-HT reuptake  
25 inhibitors (SSRIs) and offer a new rationale for rapid onset of effect in the treatment of affective disorders, for instance the antidepressant actions.

The compound (*R*)-5-carbamoyl-8-fluoro-3-*N,N*-dicyclobutylamino-3,4-dihydro-2*H*-1-benzopyran in the form of the free base, and pharmaceutically acceptable salts thereof as disclosed herein is described in WO 95/11891, as a selective 5-HT<sub>1A</sub> receptor antagonist.

- 5 The enantiomer (+)-1-[3-(dimethylamino)propyl]-1-(*p*-fluorophenyl)-5-phthalancarbonitrile disclosed herein, and which is stated to be a 5-HT reuptake inhibitor is described in US 4,943,590.

The (*R*)-5-carbamoyl-8-fluoro-3-*N,N*-dicyclobutylamino-3,4-dihydro-2*H*-1-benzopyran is  
10 in the form of the free base, or a pharmaceutically acceptable salt and/or solvate thereof. Both organic and inorganic acids can be employed to form nontoxic pharmaceutically acceptable acid addition salts of the compounds of this invention. Illustrative acids are sulfuric, nitric, phosphoric, oxalic, hydrochloric, formic, hydrobromic, citric, acetic, lactic, tartaric, dibenzoyltartaric, diacetyltartaric, pamoic, ethanedisulfonic, sulfamic, succinic,  
15 propionic, glycollic, malic, gluconic, pyruvic, phenylacetic, 4-aminobenzoic, anthranilic, salicylic, 4-aminosalicylic, 4-hydroxybenzoic, 3,4-dihydroxybenzoic, 3,5-dihydroxybenzoic, 3-hydroxy-2-naphthoic, nicotinic, methanesulfonic, ethanesulfonic, hydroxyethanesulfonic, benzenesulfonic, *p*-toluenesulfonic, sulfanilic, naphthalenesulfonic, ascorbinic, cyclohexylsulfamic, fumaric, maleic and benzoic acids. These salts are readily  
20 prepared by methods known in the art.

- The (*R*)-5-carbamoyl-8-fluoro-3-*N,N*-dicyclobutylamino-3,4-dihydro-2*H*-1-benzopyran possesses a high affinity to the specific subgroup of 5-HT<sub>1A</sub> receptor in the CNS and acts as an antagonist on that 5-HT<sub>1A</sub> receptor, and as also shows favourable bioavailability after  
25 oral administration.

The composition according to the present invention may exist in one pharmaceutical formulation comprising of (*R*)-5-carbamoyl-8-fluoro-3-*N,N*-dicyclobutylamino-3,4-dihydro-2*H*-1-benzopyran in the form of the free base, or a pharmaceutically acceptable  
30 salt and/or solvate thereof, and (+)-1-[3-(dimethylamino)propyl]-1-(*p*-fluorophenyl)-5-

phthalancarbonitrile in the form of the free base, or a pharmaceutically acceptable salt and/or solvate thereof. Alternatively, the composition may exist in two different pharmaceutical formulations, one for (*R*)-5-carbamoyl-8-fluoro-3-*N,N*-dicyclobutylamino-3,4-dihydro-2*H*-1-benzopyran in the form of the free base, or a pharmaceutically acceptable salt and/or solvate thereof and one for (+)-1-[3-(dimethylamino)propyl]-1-(*p*-fluorophenyl)-5-phthalancarbonitrile in the form of the free base, or a pharmaceutically acceptable salt and/or solvate thereof. The pharmaceutical formulation may be in the form of tablets or capsules, powders, mixtures, solutions or other suitable pharmaceutical formulation forms such as patches and nasal formulations.

10

The composition of the present invention can be prepared <sup>such</sup> by that (*R*)-5-carbamoyl-8-fluoro-3-*N,N*-dicyclobutylamino-3,4-dihydro-2*H*-1-benzopyran in the form of the free base, or a pharmaceutically acceptable salt and/or solvate thereof is incorporated into the same pharmaceutical formulation as (+)-1-[3-(dimethylamino)propyl]-1-(*p*-fluorophenyl)-5-phthalancarbonitrile in the form of the free base, or a pharmaceutically acceptable salt and/or solvate thereof by e.g. mixing in a conventional way.

The present invention also includes a method of improving the onset of therapeutic action by concomitant administration of a composition comprising (*R*)-5-carbamoyl-8-fluoro-3-*N,N*-dicyclobutylamino-3,4-dihydro-2*H*-1-benzopyran in the form of the free base, or a pharmaceutically acceptable salt and/or solvate thereof and (+)-1-[3-(dimethylamino)propyl]-1-(*p*-fluorophenyl)-5-phthalancarbonitrile in the form of the free base, or a pharmaceutically acceptable salt and/or solvate thereof.

A further embodiment of the present invention is a kit containing a dosage unit of (*R*)-5-carbamoyl-8-fluoro-3-*N,N*-dicyclobutylamino-3,4-dihydro-2*H*-1-benzopyrans in the form of the free base, or a pharmaceutically acceptable salt and/or solvate thereof, and a dosage unit of (+)-1-[3-(dimethylamino)propyl]-1-(*p*-fluorophenyl)-5-phthalancarbonitrile in the form of the free base, or a pharmaceutically acceptable salt and/or solvate thereof, optionally with instructions for use.

**Pharmaceutical formulations**

According to the present invention the compounds in the composition will normally be  
5 administered orally, rectally, transdermally, nasally or by injection, in the form of  
pharmaceutical formulations comprising the active ingredient either as a free base, a  
solvate e.g. a hydrate or a pharmaceutically acceptable non-toxic acid addition salt, e.g. the  
hydrochloride, hydrobromide, lactate, acetate, phosphate, sulfate, sulfamate, citrate,  
tartrate, oxalate and the like in a pharmaceutically acceptable dosage form. The dosage  
10 form may be a solid, semisolid or liquid formulation. Usually the active substances will  
constitute between 0.1 and 99% by weight of the formulation, more specifically between  
0.5 and 20% by weight for formulations intended for injection and between 0.2 and 50% by  
weight for formulations suitable for oral administration.

15 The pharmaceutical formulation comprises the active ingredients, optionally in association  
with adjuvants, diluents, excipients and/or inert carriers.

To produce pharmaceutical formulations of the composition of the invention in the form of  
dosage units for oral application, the selected compounds may be mixed with a solid  
20 excipient, e.g. lactose, saccharose, sorbitol, mannitol, starches such as potato starch, corn  
starch or amylopectin, cellulose derivatives, a binder such as gelatin or poly-  
vinylpyrrolidone, disintegrants e.g. sodium starch glycolate, cross-linked PVP and cross-  
carmellose sodium; and a lubricant such as magnesium stearate, calcium stearate,  
polyethylene glycol, waxes, paraffin, and the like, and an antisticking agent such as talc or  
25 colloidal silicon dioxide, and then compressed into tablets. If coated tablets are required,  
the cores, prepared as described above, may be coated with a polymer known to the man  
skilled in the art e.g. HPMC, HC or other cellulose derivatives or PVP, wherein the  
polymer is dissolved in water or a readily volatile organic solvent or mixture of organic  
solvents. Alternatively, the tablets can be coated with a concentrated sugar solution which  
30 may contain e.g. gum arabic, gelatine, talcum, titanium dioxide, and the like. Dyestuffs

may be added to these coatings for instance in order to readily distinguish between tablets containing different active substances or different amounts of the active compounds.

For the formulation of soft gelatin capsules, the active substances may be admixed with e.g. a vegetable oil or polyethylene glycol. Hard gelatine capsules may contain granules of the active substances using any of the above mentioned excipients for tablets e.g. lactose, saccharose, sorbitol, mannitol, starches (e.g. potato starch, corn starch or amylopectin), cellulose derivatives, plasticizers, polyetheneglycole, waxes, lipids or gelatin. Also liquids or semisolids of the drug can be filled into hard gelatin capsules.

Dosage units for rectal application can be solutions or suspensions or can be prepared in the form of suppositories comprising the active substances in a mixture with a neutral fatty base, or gelatin rectal capsules comprising the active substances in admixture with vegetable oil or paraffin oil. Liquid formulations for oral application may be in the form of solutions, syrups or suspensions, for example solutions containing from about 0.2% to about 20% by weight of the active substances herein described, the balance being sugar and a mixture of ethanol, water, glycerol and propylene glycol. Optionally such liquid formulations may contain colouring agents, flavouring agents, saccharin and carboxymethyl-cellulose as a thickening agent or other excipients known to a person skilled in the art.

Solutions for parenteral applications by injection can be prepared in an aqueous solution of a water-soluble pharmaceutically acceptable salt of the active substances, preferably in a concentration of from about 0.5% to about 10% by weight. These solutions may also contain stabilizing agents and/or buffering agents and may conveniently be provided in various dosage unit ampoules.

Suitable daily doses of the active compounds in the composition of the invention in therapeutic treatment of humans are about 0.01-100 mg/kg bodyweight for peroral administration and 0.001-100 mg/kg bodyweight for parenteral administration. The daily

doses of the active ingredient (*R*)-5-carbamoyl-8-fluoro-3-*N,N*-dicyclobutylamino-3,4-dihydro-2*H*-1-benzopyran in the form of the free base, or a pharmaceutically acceptable salt and/or solvate thereof may very well differ from the daily doses of the active ingredient (+)-1-[3-(dimethylamino)propyl]-1-(*p*-fluorophenyl)-5-phthalancarbonitrile in the form of  
5 the free base, or a pharmaceutically acceptable salt and/or solvate thereof but the doses can also be the same for both of the active ingredients.

### **Medical and Pharmaceutical Use**

10 In a further aspect the present invention provides the use of the composition of (*R*)-5-carbamoyl-8-fluoro-3-*N,N*-dicyclobutylamino-3,4-dihydro-2*H*-1-benzopyran in the form of the free base, or a pharmaceutically acceptable salt and/or solvate thereof and (+)-1-[3-(dimethylamino)propyl]-1-(*p*-fluorophenyl)-5-phthalancarbonitrile in the form of the free base, or a pharmaceutically acceptable salt and/or solvate thereof, and the use in the  
15 treatment of 5-hydroxytryptamine mediated disorders, such as affective disorders. Examples of affective disorders are disorders in the CNS such as mood disorders (depression, major depressive episodes, dysthymia, seasonal affective disorder, depressive phases of bipolar disorder), anxiety disorders (obsessive compulsive disorder, panic disorder with/without agoraphobia, social phobia, specific phobia, generalized anxiety  
20 disorder, posttraumatic stress disorder), personality disorders (disorders of impulse control, trichotellomania) and sleep disorders. Other disorders in the CNS such as eating disorders (obesity, anorexia, bulimia), premenstrual syndrome, sexual disturbances, alcoholism, tobacco abuse, autism, attention deficit, hyperactivity disorder, migraine, memory disorders (age associated memory impairment, presenile and senile dementia such  
25 as Alzheimer's disease), pathological aggression, schizophrenia, endocrine disorders (e g hyperprolactinaemia), stroke, dyskinesia, Parkinson's disease, thermoregulatory disorders, pain and hypertension may also be treated with the combination described herein. Examples of other hydroxytryptamine mediated disorders are urinary incontinence, vasospasm and growth control of tumors (e g lung carcinoma) and it may be possible to  
30 treat those with the combination described herein as well.

### Pharmacology

Potential of the 5 HT<sub>1A</sub> autoreceptor blocking effect of 5-HT of (+)-1-[3-(dimethylamino)propyl]-1-(p-fluorophenyl)-5-phthalanarbonitrile by using of (*R*)-5-carbamoyl-8-fluoro-3-*N,N*-dicyclobutylamino-3,4-dihydro-2*H*-1-benzopyran.

### Materials and methods

#### Animals

The studies were carried out in male Sprague-Dawley rats (290-450g; B&K Universal, Sollentuna, Sweden). The animals were housed for at least 3 weeks after arrival until used in the experiments.

#### Methods

The studies were carried out by means of intra-cerebral microdialysis in awake rats. To assess any putative regional differences between dorsal and median rapheinnervated 5-HT projection areas, dialysis probes were simultaneously implanted both into the frontal cortex (FCx) and dorsal hippocampus (DH).

#### Microdialysis

The rats were anaesthetised with a mixture of ketamine HCl (67 mg/kg intraperitoneal (IP); Ketalar<sup>®</sup>, Park-Davis) and xylazine HCl (13 mg/kg IP; Rompun<sup>®</sup>, Bayer-Leverkusen). U-shaped microdialysis probes (total dialysis fibre length 4 mm, OD 220µm) were stereotactically implanted in the frontal cortex (FCx) and dorsal hippocampus (DH); probe tips at AP +3.5, ML -3.0, DV -4.2 and -4.3, ML +2.5, DV -4.2, respectively, vs. bregma and dura surface (Paxinos, et al, in The Rat Brain in Stereotaxic Coordinates, 2nd Ed., Academic Press, San Diego (1996)). The microdialysis studies were performed in conscious animals after a 40-48 h recovery period, during which they were kept individually. Food and water were allowed *ad libitum* in the plastic cages subsequently used in the experimental sessions. On the day of the experiment, the probe inlets were

connected to a syringe perfusion pump (CMA/100; CMA Microdialysis AB, Sweden), delivering artificial CSF (Hjorth, S., J. Neurochem. 60:776-779 (1993)) at a speed of 1.3 µl/min. Twenty-min dialysate fractions were collected from the probe outlet tubing, and immediately analysed for 5-HT and 5-HIAA by standard HPLC-EC methods. After the  
s perfusion was commenced, a period of 2-3 h was allowed to establish stable baseline dialysate levels of 5-HT, prior to drug treatment(s).

**CLAIMS**

1. A composition comprising of (*R*)-5-carbamoyl-8-fluoro-3-*N,N*-dicyclobutylamino-3,4-dihydro-2*H*-1-benzopyran in the form of the free base, or a pharmaceutically acceptable  
5 salt and/or solvate thereof, and (+)-1-[3-(dimethylamino)propyl]-1-(*p*-fluorophenyl)-5-phthalancarbonitrile in the form of the free base, or a pharmaceutically acceptable salt and/or solvate thereof.
2. Use of the composition according to claim 1 for the manufacture of a medicament for  
10 the treatment of 5-HT mediated disorders.
3. The use according to claim 2 for the manufacture of a medicament for the treatment of affective disorders.
- 15 4. The use according to claim 3 for the manufacture of a medicament for the treatment of mood disorders.
5. The use according to claim 4 for the manufacture of a medicament for the treatment of depression.  
20
6. A method for the treatment of 5-HT mediated disorders by administering to a patient suffering therefrom the composition defined in claim 1.
7. The method according to claim 6 for the treatment of affective disorders.  
25
8. The method according to claim 7 for the treatment of mood disorders.
9. The method according to claim 8 for the treatment of depression.

10. A method of improving the onset of therapeutic action by concomitant administration of a composition defined in claim 1.
11. A pharmaceutical formulation wherein the active ingredients are those in the  
5 composition defined in claim 1, optionally in association with adjuvants, excipients and/or inert carriers.
12. A pharmaceutical formulation according to claim 11 wherein (*R*)-5-carbamoyl-8-fluoro-3-*N,N*-dicyclobutylamino-3,4-dihydro-2*H*-1-benzopyran in the form of the free base,  
10 or a pharmaceutically acceptable salt and/or solvate thereof is concomitantly administered with (+)-1-[3-(dimethylamino)propyl]-1-(*p*-fluorophenyl)-5-phthalan carbonitrile in the form of the free base, or a pharmaceutically acceptable salt and/or solvate thereof.
13. A pharmaceutical formulation according to any one of claims 11-12 for use in the  
15 treatment of 5-HT mediated disorders.
14. A pharmaceutical formulation according to any one of claims 11-12 for use in the treatment of affective disorders.
- 20 15. A pharmaceutical formulation according to any one of claims 11-12 for use in the treatment of mood disorders.
16. A pharmaceutical formulation according to any one of claims 11-12 for use in the treatment of depression.
- 25 17. A process for the preparation of the composition according to claim 1 whereby (*R*)-5-carbamoyl-8-fluoro-3-*N,N*-dicyclobutylamino-3,4-dihydro-2*H*-1-benzopyran in the form of the free base, or a pharmaceutically acceptable salt and/or solvate thereof is incorporated into the same pharmaceutical formulation as (+)-1-[3-(dimethylamino)propyl]-1-(*p*-

fluorophenyl)-5-phthalancarbonitrile in the form of the free base, or a pharmaceutically acceptable salt and/or solvate thereof.

18. A process for the preparation of the composition according to claim 1 whereby (*R*)-5-carbamoyl-8-fluoro-3-*N,N*-dicyclobutylamino-3,4-dihydro-2*H*-1-benzopyran in the form of the free base, or a pharmaceutically acceptable salt and/or solvate thereof is in a one pharmaceutical formulation is combined with (+)-1-[3-(dimethylamino)propyl]-1-(*p*-fluorophenyl)-5-phthalancarbonitrile in the form of the free base, or a pharmaceutically acceptable salt and/or solvate thereof is in a different pharmaceutical formulation.

10

19. A kit containing a dosage unit of (*R*)-5-carbamoyl-8-fluoro-3-*N,N*-dicyclobutylamino-3,4-dihydro-2*H*-1-benzopyran in the form of the free base, or a pharmaceutically acceptable salt and/or solvate thereof, and a dosage unit of (+)-1-[3-(dimethylamino)propyl]-1-(*p*-fluorophenyl)-5-phthalancarbonitrile in the form of the free base, or a pharmaceutically acceptable salt and/or solvate thereof, optionally with instructions for use.

15

**AMENDED CLAIMS**

[received by the International Bureau on 15 February 2000 (15.02.00);  
original claims 1-19 replaced by amended claims 1-22 (3 pages)]

1. A composition comprising of (*R*)-5-carbamoyl-8-fluoro-3-*N,N*-dicyclobutylamino-3,4-dihydro-2*H*-1-benzopyran in the form of the free base, or a pharmaceutically acceptable  
5 salt and/or solvate thereof, and (+)-1-[3-(dimethylamino)propyl]-1-(*p*-fluorophenyl)-5-phthalancarbonitrile in the form of the free base, or a pharmaceutically acceptable salt and/or solvate thereof.
2. Use of the composition according to claim 1 for the manufacture of a medicament for  
10 the treatment of 5-HT mediated disorders.
3. The use according to claim 2 for the manufacture of a medicament for the treatment of affective disorders.
- 15 4. The use according to claim 3 for the manufacture of a medicament for the treatment of mood disorders.
5. The use according to claim 4 for the manufacture of a medicament for the treatment of depression.  
20
6. The use according to claim 2 in the manufacture of a medicament in the prevention or in the treatment of urinary incontinence.
7. A method for the treatment of 5-HT mediated disorders by administering to a patient  
25 suffering therefrom the composition defined in claim 1.
8. The method according to claim 7 for the treatment of affective disorders.
9. The method according to claim 8 for the treatment of mood disorders.  
30

10. The method according to claim 9 for the treatment of depression.

11. A method according to claim 7 for the prevention or the treatment of urinary incontinence.

5

12. A method of improving the onset of therapeutic action by concomitant administration of a composition defined in claim 1.

13. A pharmaceutical formulation wherein the active ingredients are those in the composition defined in claim 1, optionally in association with adjuvants, excipients and/or inert carriers.

14. A pharmaceutical formulation according to claim 13 wherein (*R*)-5-carbamoyl-8-fluoro-3-*N,N*-dicyclobutylamino-3,4-dihydro-2*H*-1-benzopyran in the form of the free base, or a pharmaceutically acceptable salt and/or solvate thereof is concomitantly administered with (+)-1-[3-(dimethylamino)propyl]-1-(*p*-fluorophenyl)-5-phthalancarbonitrile in the form of the free base, or a pharmaceutically acceptable salt and/or solvate thereof.

15. A pharmaceutical formulation according to any one of claims 13-14 for use in the treatment of 5-HT mediated disorders.

16. A pharmaceutical formulation according to any one of claims 13-14 for use in the treatment of affective disorders.

25

17. A pharmaceutical formulation according to any one of claims 13-14 for use in the treatment of mood disorders.

18. A pharmaceutical formulation according to any one of claims 13-14 for use in the treatment of depression.

30

19. A pharmaceutical formulation according to any one of claims 13-14 for use in the treatment of urinary incontinence.

5 20. A process for the preparation of the composition according to claim 1 whereby (*R*)-5-carbamoyl-8-fluoro-3-*N,N*-dicyclobutylamino-3,4-dihydro-2*H*-1-benzopyran in the form of the free base, or a pharmaceutically acceptable salt and/or solvate thereof is incorporated into the same pharmaceutical formulation as (+)-1-[3-(dimethylamino)propyl]-1-(p-fluorophenyl)-5-phthalancarbonitrile in the form of the free base, or a pharmaceutically  
10 acceptable salt and/or solvate thereof.

21. A process for the preparation of the composition according to claim 1 whereby (*R*)-5-carbamoyl-8-fluoro-3-*N,N*-dicyclobutylamino-3,4-dihydro-2*H*-1-benzopyran in the form of the free base, or a pharmaceutically acceptable salt and/or solvate thereof is in a one  
15 pharmaceutical formulation is combined with (+)-1-[3-(dimethylamino)propyl]-1-(p-fluorophenyl)-5-phthalancarbonitrile in the form of the free base, or a pharmaceutically acceptable salt and/or solvate thereof is in a different pharmaceutical formulation.

22. A kit containing a dosage unit of (*R*)-5-carbamoyl-8-fluoro-3-*N,N*-dicyclobutylamino-  
20 3,4-dihydro-2*H*-1-benzopyran in the form of the free base, or a pharmaceutically acceptable salt and/or solvate thereof, and a dosage unit of (+)-1-[3-(dimethylamino)propyl]-1-(p-fluorophenyl)-5-phthalancarbonitrile in the form of the free base, or a pharmaceutically acceptable salt and/or solvate thereof, optionally with instructions for use.

# INTERNATIONAL SEARCH REPORT

International application No.

PCT/SE 99/01599

## A. CLASSIFICATION OF SUBJECT MATTER

IPC7: A61K 31/35

According to International Patent Classification (IPC) or to both national classification and IPC

## B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)

IPC7: A61K

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

SE,DK,FI,NO classes as above

Electronic data base consulted during the international search (name of data base and, where practicable, search terms used)

## C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category*	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
A	WO 9633710 A1 (ASTRA AKTIEBOLAG), 31 October 1996 (31.10.96)  -----	1-5,11-19

Further documents are listed in the continuation of Box C.

See patent family annex.

### \* Special categories of cited documents

"A" document defining the general state of the art which is not considered to be of particular relevance

"B" earlier document but published on or after the international filing date

"I" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)

"O" document referring to an oral disclosure, use, exhibition or other means

"P" document published prior to the international filing date but later than the priority date claimed

"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understate the principle or theory underlying the invention

"X" document of particular relevance: the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

"Y" document of particular relevance: the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art

"&" document member of the same patent family

Date of the actual completion of the international search

28 December 1999

Date of mailing of the international search report

22 -01- 2000

Name and mailing address of the ISA

Swedish Patent Office  
Box 5055, S-102 42 STOCKHOLM  
Facsimile No. +46 8 666 02 86

Authorized officer

Göran Karlsson / MR

# INTERNATIONAL SEARCH REPORT

International application No.  
PCT/SE99/01599

## Box I Observations where certain claims were found unsearchable (Continuation of item 1 of first sheet)

This international search report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. ☒ Claims Nos.: 6-10  
because they relate to subject matter not required to be searched by this Authority, namely:  
**A method for treatment of the human or animal body by therapy, see Rule 39.1**
2. ☐ Claims Nos.:  
because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically:

## Box II Observations where unity of invention is lacking (Continuation of item 2 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:

1. ☐ As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims.
2. ☐ As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
3. ☐ As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:
4. ☐ No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims: it is covered by claims Nos.:

### Remark on Protest

- ☐ The additional search fees were accompanied by the applicant's protest.  
☐ No protest accompanied the payment of additional search fees.
